I'm looking to put together a line array for PA in small clubs. Odd shaped rooms with tight stage area. Like a Bose PAS but cheap - real cheap. I ran across these: <http://www.mcminone.com/product.asp?catalog%5Fname=MCMProducts&product%5Fid=58%2D9935> What do you think? I can put together a sub to with them, but does anybody have an idea for suitable tweeters? Thanks,

If you don't want it to sound "real cheap" you might want a smaller midbass driver. It could be tough to find any tweeter that can play low enough for the 5.5" center-to-center spacing on the ones you linked, let alone a cheap tweet. Have you read Dr. Griffin's paper on line arrays? It would be better to go shopping with a solid design in mind. Your goals seem realistic, I just think you will be happier with the results after reading.

Thanks for the input. Do you have any recommendations on a smaller mid around the same price? thanks
