Hi all,Who makes array kits? What price levels are out there? I'm not afraid to DIY but I'd like a kit with crossover already designed. IMO, speakers are simple but the "big picture" isn't. I want a design that's already been nailed down.Thanks,David

The best known source for line array kits is Rick Craig of Selah Audio. The Selah RS-8 kit sells for $2,495/pr. If that's outside your budget I'm sure Rick could design a custom kit for less using planar tweeters instead of the more expensive founteks used in the RS-8. I suggest you contact him directly at the link below.
RS-8 Line Array

They sell the kits for GR Research's LS series Arrays($1,995) and also a kit for Dr. Griffin's latest line array w/ DEQX DSP based crossover.Only plans/directions for cabinet construction are included - no wood.
