Hi Guys, This isn't a true audio question, but there are a lot of smart people here, and I need advice. I want to use a LMS card in a "modern" computer. Unfortunately the card uses an ISA slot. None of the computers I've encountered have one. There has got to be a way to adapt the card. Help please. Thank you. Steve

Let's take this to the measurement forum. I ran the LMS board in one of my computers, but also am doing some research to help David Lee get a motherboard for his system. So we can discuss this over there, and that way maintain the information in the appropriate forum. Please start a thread there, and when I've made a list of motherboards that will work, I'll reply to your post.
