I'm using Dayton RS 180 eight per side along 8 Fountek Neo CD2 I am looking for a replacement for the Dayton's to take my arrays to the upper level , the contender has to fit exactly in the same hole and preferably no aluminum cone or other sythetic fiber material as I tend to think those have ringing problems and are more difficult to deal with , Any advise is welcome .my budget for one driver would be around 70 \$Thanks JP

Vifa has a wood pulp cone that I think would fit but cost may be a bit higher !!
