How do you wire in a center speaker to Head L & R Hi level outputs. Cadillac Bose heads have them .... do Bose heads have a separate center amp? Also saw center spkr in Chrysler Pacifica SUVs

If you use a speaker with dual voice coils, you can connect to amplifier outputs. Otherwise, you'll need to have a separate center channel. You can sum two channels together at preamp level with a couple of resistors, but you can't do that on the speaker outputs.
