Thanks Jim.Hey, I like my kt-7500 stock. I listen to it in my family rom, with a copper wire as an antenna, cos i am not basically allowed to deface the wall with a dipole or any such thing. Do you think modding mine will make any difference, given that I use such a primitive antenna?thanks-akhilesh

Hi Akhilesh, Long time... no talk... Buy some $9 rabbit ears from Radio Shack or some other store. That will help reception quite a bit over your wire. Hook it to the 300 ohm pair. Mods to the 7500 make a totally different (better) sound. With our latest mods, which adds Ray's passive de-emphasis circuit, it brings it over the top IMO. It's pretty much a hands down winner. We haven't added those latest mods it to our DIY page yet, here...
http://www.fmtunerinfo.com/DIY.html but hope to soon. Get in there and start moding! 8:-) jim...

Thanks Jim. It looks somewhat intimidating for me, since I have no idea how tuners work. Maybe i'll opne it up and see if I can figure out what is what. I might be harassing you with newbie questoins if I do... like where in the tuner do I find the ....etc  -akhilesh
