Perhaps you should have tried a second bottle? To A/B the effect?During and after my traditional First-Nite-of-Chanukkah dinner, a Pecan Pie and a bottle of wine (Sangiovese this year, mmmm)I noticed an extension of the lush mids into the treble. In fact, as the night wore on, everything became lusher and lusher.

There is nothing wrong with your hearing at all. It's simple physics really. As the liquid level in the bottle drops the volume inside the bottle increases. Therby dropping the perceived sound frequency to a lower octave After drinking two or more bottles you may appear deaf to some but in reality you have merely passed out
