I started out with response plotting at the drivers seat, ended up with center console measurements to cover the stereo image. These are individual ride plots that can be compared/ distortion via response amplitude peaks and troughs.Do you have a ride in mind? - or I can send a sample.

If anyone else wants a response ref check on thier ride, before you do any changes let me know - I can probably get you the data.

Post a few measurements of popular cars here. I think it would be very interesting!

I tried to load a ride plot into the reply to no avail. Think I would need an email address with an attachment area to send a word.doc plot file.

Sorry, I couldn't fig how to do it (age factor). Lot easier with attach feature, but I can see why the forum doesn't want to use it.If anyone wants a plot; you'll have to send me your email addr.
