I have acquired a Radiola model 17 with a broken tuning wheel. This is the pot metal wheel that goes on the shaft of the tuning condenser.Since I have all the pieces of the old tuning wheel I'm wondering if I can just epoxy it back together and make this radio sing. Has anybody had any luck doing this? I think I would still want to get a replacement wheel in the long run if possible.

Yeah, you could probably do that but I'd definitely find an old scrap radio to swap with. If you're lucky, you'll find one that has the pully attached with a set screw instead of being pressed on.
