We found a Montgomery Ward Airline Radio. The information we took off the back is as follows: Super Heterodyne No 62-84 Class "B" floor model. Volts 115 Cycles 69 Watts 100. Chicago, USA. The condition is very good and it plays great. It has a square wood casing with birds eye maple and walnut wood with 6 spindle legs. Like to know what year it might be and value.

Wow, sounds attractive! The thing is, Montgomery Ward radios are sometimes hard to get information on. They buy chassis from OEMs and brand them as Montgomery Ward. What I've done is to try and find the schematic for the chassis by its tube compliment. Then I can identify it, and have service documents at the same time.
