What tubes are in it? That's one of the best ways to date some of the old Montgomery Ward radios. I usually try to identify the chassis by the tube complement and locations. There may be a label that shows what tubes are used and where they go.

It's hard to read the tubes. There is a logo that looks like it says G&Co. and they are made in the USA.The tube layout sticker says It has three 6BA6 tubes" " one 12AT7" " two 6AV6 " " two 6K6-GT" " one 6ALS" " one 5Y3-GTI believe my grandmother got it in the 50's.I have offers of people wanting to buy it and they have many questions but I don't have any answers!I am not sure what it is worth if anything at all.Thank You in advance for any information you may have!

That's a very common tube set, and can be used to date the set. From that tube complement, I'd say you're right that it was made in the 1950's. The schematics can probably be located based on that too, but it is largely a matter of manually looking through prints for a matching chassis layout.
