I always loved the sound of those, but I can tell you that they're very delicate. The higher the crossover and slope, the better.

Thanks wayne for the forewarning. I am planning on using them possibly on aother folded pipe 1/4 wave enclosure either with a 6.5" Seas driver or a vifa. I'm currently listening to a set of these I built using Seas and vifa tweets crossed at 2500hz. Dare I go anywhere near this, or should I be looking for another driver to go with the emits?

I wouldn't crossover below 5kHz or less than second-order.
