Hello--new to forum. Looking for resources on power supplies for my old tube condensers--WE and others. Voltages from 6VDC on A+ to 200VDC on B+. Any suggestions? Built battery supplies, but that's not too economical. Thanks.

Are you up for building your own?

Well, I haven't done it before and I wouldn't know where to start with parts. Any kits out there???

I don't know of a power supply kit, but if you were comfortable with building circuits, a power supply is pretty simple.
