Got one from my Aunt who had it in the basement. Nice shape. I fired it up but the rec tube is bad. Huge transformers; bigger than my Dyna's. I think I am going to replace all the caps and test it. I have the manual and it came with a full set of Mullards. Kinda ugly but the few reports on the net give it good marks for sound. It has nice old bakelite knobs and brushed aluminum faceplate. I got to get going on these old integrated amps laying around here. I should have everything done in time for my son to sell them off after I go into the nursing home.

Wow, cool! Let us know how it works out! Sometimes those mothballed finds are really amazing.
