Just added to my collection fresh from a local theatre a 100% original Western Electric 42A and 46A Amplifiers. I have plenty of info on the 42A but cannoth seem to find much on the 46A. Did they not make many 46A's????? What are the approximate values of these for insurance purposes? Any help would be appreciated. Thanks guys!!!

Probably no help, but I did find this page on Western Electric amplifiers:
Western Electric - Rosetta Stone for Triodes
