Hi, i recently plugged my AVT 150S SPEAKER OUTPUTS INTO MY COMPUTER NAD IT stopped working. I later looked up and read that it was probobly due ot the fact i should only plug the output into 4 ohms, but it wont turn on at al and i beileve a fese is blown, could anyone help me on a home solution to this problem?

Could also be that the amplifier outputs should be isolated and not connected to earth ground. What fuse is blowing?

I'm talking about electrical connections, and that the amp may not work with a speaker wire being grounded. The (+/-) speaker outputs may be a complementary pair instead of single ended.
