I want to make an guitar amp. I found an old german magazine called "elrad" edition from january 1986 and there was an article about guitar amp called "gitarren combo-verstarker" made by Dipl.-ing. M.J. von der veen. so this is my problem, i didnot found scheme of this amp on the net, if somebody have any information please leave me an mesage. thanks

If you think about Menno van der Veen, in his book "Modern High End Valve Amplifiers" there`s a schematic and description of guitar amp output stage, 4x EL84, ECC81 "split-load" phase inverter.In my opinion, the best "guitar DIY books" are books by Kevin O`Connor. For example, his little book "Tonnes Of Tone" covers (in detail - schematic and wiring) guitar preamp, power amp(s), bass preamps, Power supply, etc.Beginner oriented, simple, but with good projects. There are more books, not cheap, but you get good value for the money...
