I want to build my own guitar amp. I'm not super handy at this type of thing, but I'm willing to take my time and learn as I go. Have you ever used a kit? If so, would you recommend it?

Best way to start is to build some smaller kits for practice. For example, you should try building a few Velleman kits. They even have tube hi-fi amp kits:<http://www.vellemanusa.com/us/enu/product/list/?id=523008A> a good place to start for a beginner who wants to build a tube guitar amp is the AX84 website. There are a couple of kits available for sale from AX84 users.<http://www.ax84.com> Once you know what you're doing, Mojo Musicla Supply sells everything you need to build tube guitar amps. Even cabinets, chassis and speakers. Costly, but very good quality.<http://www.mojomusicalsupply.com/index.asp>
