Hi,I have a Crate 4X12 cabinet and the inside wires have come off the speaker tabs and I'm not sure about how to re-connect them. There are 4 wires coming into the cabinet with the following colors: 1) Red 2) Black 3) Blue 4) Yellow Each speaker has two connection tabs, 1 red and 1 black. Thanks for your help!

Somebody here may be able to help, but while you're waiting for a reply, I'd probably visit the local guitar shop and see if they wouldn't be willing to ask a technician to check the wiring of a cabinet they have in stock. It's pretty easy to re-wire the whole thing, connecting series/parallel. You could trace the wires easily enough. But you could also just copy the wiring of an existing cabinet. So hopefully you can find one in a local store to copy.
