Hello all. I am looking for some assistance in designing a better monitor mix solution for the praise team at my church. I would love either system theory assistance or specific product and solutions. We currently have a behringer 32/8 w/ 6 aux eurodesk. We have drums (5 channels), Percussion (2 channels), Electric Guitar (1 channel), Acoustic Guitar (1 channel), Bass Guitar (1 channel), Synth/Keys (2 channels), Piano (2 channels), and 10 vocal channels. We use two mixes only. Each mix is driven by a pair of oversized and overpowered floor wedges. We would like to move to an in-ear solution (wired or wireless) but not sure what the most efficient system design would be or what the best products to use are. Thanks for any assistance.

I see 24 channels, yes? You're looking for a mixer that provides at least 24 channels, and you may need separate channel-level controls for monitors and mains, is that right?

What I'm looking for truthfully is for someone who is keenly experienced in live monitor mix solutions to offer some suggestions as to how we can offer the most effective, dynamic, and flexible monitoring to our band and vocal teams. Thanks.

Check out Sennheiser receivers and transmitters sounds like you'll need a small bank of them to put everybody on ears. Bill W.

Depending on your budget, the best praise team solution is use personal in ear mixing for each person. My favorite is aviom, and shure ears, around a grand a person. You would send up to 16 digital channels to the master unit, then breakout or daisy chain each team member. Each team member then has a small digital mixer and can adjust their own "mix" whenever they want to, and each location can save up to 16 user presets, so if you rotate members then EVERYONE gets their own ear buds, cheapies, or moulds, and they share receivers and mixers. The "mixer" has a headphone out if the person, say the drummer, does not move around a lot, they can use wired headphones, or earbuds. For your setup you'd need to sub mix the Drums to 1 or 2 channels. and make a few other compromises, this system saves you buying an ears ready console, and a monitor engineer pulling his/her hair out with nuance requests from the 20 member team. If you want to REALLY change the world, go Electric drums and amp modelers for the musicians, say good bye to stage volume. I work locally and do about 40 installs, mostly in churches per year. Where are you? How big is your church and congregation? Jeff
