Ignorant Loudness.A small amount of study would reveal the direction to take. Horizontal array with narrow directivity horns,or vertical stacks.Even the bass gets problems with arrays that wide! one guy with 12 labhorns ,as he blew them,the SPL increased! :-SRegardsMike.e

>>Even the bass gets problems with arrays that wide! one guy with 12 labhorns ,as he blew them,the SPL increased!HaHa, Where are the labhorns, looks like in the center of the picture there's 6 old keele 18" w-bins with 4-EV 4025's on the outsides, the rest looks all front loaded. And I bet they were running the same frequency range through all those folded horns, causing problems in the low frequency range also.Bill W.

lol its probably the 50kva generator, 3db of which is wasted in badly run bass stacks :SPity about the underground thing, is that the newbies are often into it without adequate background knowledge.

"Speakers: 32 Direct Radiating 7" kevlar drivers "|Speakers: 18 x 400w rms Blast Ballistic Bass horns (designed by Laurence Dickie - Blast Loudspeakers, Turbosound)|Comb filter master!
Wow

Hey it's an underground party, nothing like throwing a pound of weed on the camp fire to get everybody stoned.

Hey Bill - You gonna be at Bob's house Saturday? I want to show you what I'm doing with the new horns. I'll be doing the first vent test pretty soon, as soon as the fittings are done. Wayne
