Hey guys. Im building as tuba 24 and i have some questions about my build. First, is the last sheet on the instructions a dimensions cutout sheet for all the tubs plates, etc.? Also, how do i cut the hole for the hl-10a (like, do i use a jigsaw)? And, should i mount the driver with the woofer magnet facing the driver door cover? Also, should i use 3m super 77 to glue my carpet on or would there be a better alternative? And, how many different sheets of plywood are needed to cut to build one tuba 24? I think thats all the questions i have for now. I will post back and see if i have anymore. Thanks alot guys!
