Can someone with experiance tell me how to route my verb thru a seperate channel on my live mixer. I have always just added thru the aux but see it done live on other consoles! How does this route go and what does it do for me this way? Thanks for your time

One way to do it is:Aux out to-->reverb in, reverb out-->to line in on mixer channel. just don't turn up the auxes on the channel your sending the reverb through.Another way is using the mixer inserts taping off the send/return to go to the reverb in then reverb out to another channel.The only advantage to doing this is, you can fine tune the mix by mixing the dry channel and reverb channels seperately.
