SAw this on Bottlehead and downloaded it today. You can easily mock up your front and rear panels for controls, inputs and outputs and print out a drilling template.Moreover, you can also export the template to the Express Co. who will provide a pre-drilled pre-cut panel(s) even including text. Price and invoice right online and have it days later. Nice!
Front Panel Express

Sweet! I could have used that service about a hundred times. Getting rows of holes straight with a hand drill is nearly impossible. Sometimes hard even with a drill press. And labeling a large panel with letter transfers can take hours. So this service is killer, thanks for the link!
