I bought this combo pack from amazon.com, and I could not be happier. The compressor is strong enough to run a frameing nailer, but with the 18 ga. nailer it's big enough to charge once a night and shoot 2 sticks of nails before charging. Also, amazon.com offers \$25 off any orders over \$200, and, as always, free shipping and no tax.....Colin

Thank you, Colin.You've had no problems with it then? I've read some pretty negative things about PC compressors.

I have had no problems with this compressor or the nailers since purchasing approx. six months ago. I have used this system 2-3 times a week for trim work, and have put up approx. 2000' of trim in my house w/o a single misfire. The amazon link I previously posted has 31 5-star reviews and 4 4-star (from what I remember off the top of my head.) There are a couple of guys on my street that own this same system, and I have not heard a single complaint. PC has a break-in procedure to "seat" the compressor, and they state in the manual that the life will be dramatically shortened if not followed. Since I don't hang out on woodworking boards, I really cannot say if PC has a good or bad rep. Obviously you have heard bad things and that is something to question me on. But from my experience, this has been a good investment. If you still have some reservations about PC, look at overstock.com. They have Schultz (sp?) compressors marked

down. I am not familiar with this brand, but the pricing suggests they are rather high end. Best of luck and please keep us up-to-date on what you decide and for what reason.....Colin

I just looked at overstock.com, and it seems they have a lot fewer compressors than they did the other day. Sorry for the bad info. On the other hand, I just received a tool catalogue from amazon.com/toolcrib. It looks like they are having a sale. One compressor that looked interesting: D55155; it's a DeWalt for \$329...Again, sorry.....Colin

Bought a new compressor yesterday. I bought a Dewalt 55151 because I looked at the PC pancake compressor and thought that it didn't look too sturdy. I was especially bothered about the rubber hose from the compressor to the receiver - the Dewalt at least has flared copper tube. Also, I was talking to another guy about one of his very old compressors - he said it's an Emglo - it's still running after about 20 years. When I saw the DeWalt it had Emglo stenciled across the receiver, so I took that as a good omen. It was more than I wanted to spend (\$239) but when I saw the Porter-Cable side-by-side at \$179 it seemed worth the difference.
