I am seriously considering purchasing a nail gun, having envied Norm's for some time. I would like your advice. I am thinking about a DeWalt 18guage nailer, available for about \$100 from Amazon. I intend to use it only occasionally for projects such as speakers, tv and stereo equipment shelves, and bookcases. (To help hold the pieces together while glue dries.) Any comments? TIA

I got a 19v cordless as part of a tool system from Sears, looks sweet, haven't used it yet. I'd check one out. Probably a lot cheaper than \$100, as I got a 1/2 drill, 3/8 drill, circular and recip saw and lamp along with the stapler for \$300- with a rolling case for the whole shebang.

From my experience: 1. Porter-Cable ain't what it used to be 2. A narrow crown stapler seems to use a much more effective fastener; 2-for-one vs. a pin nailer?

I have the Porter Cable nail gun set (compressor and 2 nailers) and could not be happier. I use them in my profession (home restorer) and they have never let me down - not a single misfire in 2 years. I have no experience with the DeWalt nailer, but I can tell you from experience their warranty service is world-class. I recently purchased a DW706 (12" dual-bevel compound miter saw) and the blade guard broke (my fault) after about 50 cuts. Dropped off at the local service center and a week later it was brand new - no questions asked. If, however, you are just looking for something to use on occasion, you might want to consider Harbor Freight (www.harborfreight.com) They have nailer for about \$15. Not the best build quality, but it is functional. I picked one up just as a spare, but have never actually used it. Another place to look is

the local newspaper or "Trading Post" type of classified newspapers. I see nailers in our local one all the time for about 75% off retail. Some were used by weekend warriors and others I'm sure are beat to hell. Still, it's worth a look.....Colin

but there are bad nails!The narrow crown staple is a good idea. Typical 18Ga. brad nails will be deflected in MDF and even plywood to come out the sides of teh workpiece as much as 50% of the time.I'm a big fan of 4d. bright finish nails hit with a fairly light hammer,

Bill, Thanks for the tip. To be quite honest I have never worked with MDF, so thanks for the heads up. Too bad the MAF is not around any more. I would love to have heard one of your talks.....Colin

It really was great. Maybe we can get Bill and Bill to do it again this year at GPAF.

<http://www.amazon.com/exec/obidos/tg/detail/-/B0000C6DWE/103-2597178-6234215?%5Fencoding=UTF8&v=glancel> decided, after seeing the advice, that I needed a more serious piece of hardware. I opted for the above Senco package of a "Senco FinishPro 41XP 15-Gauge Finish Nailer with Free FinishPro 15 18-Gauge Brad Nailer" for \$250 at Amazon.I haven't used it

yet.Thanks to those who responded.
