Any one use Google SketchUp? I saw it referenced in a woodworking magazine for parts layout, like CAD.....C

I downloaded it as a possible way to view the AutoCAD drawings of some of my designs, thinking maybe I could distribute plans with it for people that don't have AutoCAD. But it's not really a viewer, it's a whole other system so the DWG files must be converted. That's not necessarily bad, but it isn't what I wanted. It's gaining popularity though; Looks like a pretty neat little program.

I downloaded it last week to try and do layouts for tube amps. Gives me a better idea of the finished look. Although I really haven't figured it out quite yet.
