Thats good because we all are heading towards vintagehood ourselves so the stuff will fit right in. My project right now is to get better at using my vintage bi-focals. Look down and stuff grows; look

up and it shrinks, got it. Now I can read the label on the preparation H tube. How does this stuff go on??

I stayed in the house that Prep. H built one time. Some friends of my parents were fixing up the old Victorian house that the guy who invented the stuff built. Gave me the willy's thinking about what kind of experiments were done in that house!
