Dumb question: What do I do with the batteries? Are they a part of the circuit?.....Colin

Hey-Hey!!!,Battery biasing the CCS provides a bit better AC and noise performance. The batteries provide a voltage reference, and what is supposed to be zero current. They allow a bigger resistor for a given level of regulated current. Leave them for Rev 2. They are worth playing with, but let's keep the number of absolutely new stuff to a minimum until we have music coming out. regards, Douglas

Wheew! Getting a little worried there, confusion reigned. Thanks for clearing that up.
