I will send an email to Heyboer regarding our group order so we can get the "bulk" discount. I believe we have 5 orders now. I will ask either for a unique part number or reference number so there is NO confusion in the ordering process. Are the following specifications correct?- 100 mA capacity from the HV (400-325-250-0-250-325-400 multi-tap) - 3A each of 5V and 6.3V, one 5V and one 6.3V- both of the heater windings CT.....Colin

Also; the 250v windings on the HV side are the rect tube. The 325 is the plate for the 5687, the 400 is what I forgot.

First, Colin got the spec's right. The multiple taps are \*ALL\* rectifier connections. They allow for a PS making ~190V, ~250V and ~320V. The other taps are for maximum rectifier flexibility. Use 5 or 6.3 V rectifiers( and there are a lot of choices ).We're using the 250-0-250 for the first iteration. regards,Douglas
