What all do you have coming, John? I have the Heyboer transformer coming, but that's it so far. I'm working on the Stoetkit, working on the cooling system for the basshorns, working on a sound install for a club, and working on a software project for a large telecom firm. That plus the daily support and maintenance duties, which are sometimes full time in themselves. So I'm stretched kinda t-h-i-n.

Wayne; all work and no play my friend. I have the transformer and choke on the way, waiting on the mos fets and the oil caps of which I bought 4 big ones and 4 7.5 uf, those I hope are correct.

Hey 'block, Your cap selection looks good. Two of the three extra 100-mike will come in handy for the amps, and the remaining one for another linestage. to playing...(clink) regards, Douglas

To playing; roger that.BTW; meaning to post regarding the name Guinevere; I had posted earlier concerning the use of the name since it belongs to you. However you want to handle that is fine with me.So; will there be another linestage?

Your Gold-leaf idea sounds absolutely brilliant. Please be sure to send me (and the rest of us) some Pix when it is done. Did you think you needed some special permission for something? ask and ye shall receive.Of course there will be another linestage. Several most likely, God willing.Still trying to track down some minor trouble with the new one. I decided it sounds better with 12BY7's than with 12GN7. I will have to put it on the bench and measure it for things like output z and confirm frequency response. Excepting the small noise problem, it is better than the previous one, and if it measures as well as I think it will...I am expanding into DH valves and multi-chassis construction.regards,Douglas

Thanks for the good wishes. I like the concept of expanding into multi-box units. The more the merrier. Good luck with the troubleshooting.
