I can't seem to make up my mind between a PP 813 amp and a PP 845. The 845 will be a bit simpler with the tools I currently have at hand. The 813 has it all over the 845 in the cool department. The 813 will likely run at lower B+ (700 v. 850-900), and will require anode caps....Power from either is comparable. It is hard to tell the diff between 40 and 60 watts. Either way, it is going to be an entirely Heyboer-Iron affair, and as it develops I plan to share the story. Just for example, the 845 Iron budget could be: Power TX Main LO TPP grid choke power valve filament TX driver valve filament TX rectifier valve TX (866's of course!!!) ~\$600/channel and the rest: Main misc. bits: bias supply PS capacitor pair of coupling caps 4x hum pots CCS makin's...tube sockets ~\$130 Valves: 2x 866 Hg vapour diodes 2x 10Y/801A 2x 845 if you stay away from NOS metal plate 845, you won't have to sell your first-born ~\$400 good glow factor rating for sure! Damn, that got expensive quick, what in the hell was I thinking? regards, Douglas

but if you do it slowly, it doesn't hurt so much....unlike pulling off a Band-Aid! There is another reason to look more closely at the 813: it is easier to drive than the 845. Also, no sense going to all the trouble of building when the parts or design are not top-shelf. The assembly/craftsman labour is the same either way, might as well build a really good amp. Another thing to lean toward the big ones: I already have a medium sized one, a 3-6 dB increase is required to be worthwhile. The medium sized amp is going to come in at about half the price of the big DH amps with proportionally bigger power Iron. If it were easy, everybody would be doing it. regards, Douglas

"If it were easy, everybody would be doing it." This sentence tells the all - even experienced builders can have some "difficulties" with ~1kV B+, anode caps, multiple TX/chokes, Hg rectifiers, secondary voltages that can kill if you staring at it too long, high drive/IT TX - to name just the few. Normally, go for it - the rest of us would read it with interest :-).
