Hi Damir and all,I like this forum and the group projects!Enjoy your post on CCS.CCS is some thing I thought was gimmic as it is sort of dynamicly adjusted buffer, but I think it is real and I must try it for myself!!Best rgds to every oneWilliam LeeSingapore

hi Douglas,Are you the Sec-7G in AA?Yes, it seemed that people here are friendly and can understand each other!I just pull out a FLuke scope meter I bought from Ebay 6 months ago and play around with it. The last time I used a scope was in the Uni 25 years ago... Boy am I so old already now??I do tweak a lot on tubes and SS amps and DVD player audio board. Too lazy to build a new amp from scratch and that's way I hope to see if tehre is any project here I could participate.I do collect vintage amps, tuner, and R2R decks, and try to make them sound good....Now I hope to play with CCS after denying it for some time. I consideration was that they are mainly SS and it is sort of dynamics balancing of current and voltages.... wouldn't it introduce noises and oscilation to the amp.Best rgdsWilliam Lee

I go by Sector-7G on AA. I am glad to hear of your experiments. I personally prefer a combination of old and new circuits and materials. Some old parts(like low level shielded TX's) are difficult to make now. Some new....Anyway, welcome!regards,Douglas
