Hey-Hey!!!,I am curious as to the final price tag on this project. When all the little bits are added together I suspect we broke the $200 level.regards,Douglas

What I have is;72.00 trans60 caps35 choke18connectors(RCA's IEC etc.)The Chassis was free from old partspassive parts 35donated mos-fetsLooking at about 250$ all told. Considering the level of quality and design about 1/10 the price you would pay retail.The custom chassis I intended to use is 220$ but nice; so you could go close to 500$ with very high quality chassis.
