Subject: New PCB for the CCS

Hi, nice to be back...I built two "universal" CCS "module" on the PCB. Marker and nail- polish, then Fe-III-Chlorid, as usual...Thanks Doug for the mosfets:-)I added local decoupling cap 1uF/630V (not necessary). Dimensions of the board are 32x75mm. As you can see, I didn`t install R3 yet, I planned to use a fixed resistor. I tried both CCS with battery and they worked, but didn`t try it in the real circuit so far...

Welcome back!I'm eager to start an amp project. I know, I never got started on my preamp. But I did save a pair of 2A3's in the hopes we might do something with them here.

Thank you all.New projects (2A3) - actually, I have SE 300B in my mind first. Probably I`ll write about it gradually - output stage, PS, various drivers, etc. - till the finished amp. I have many "breadboard" experiments in plan, expecting new PT from Netherlands, and I hope that I`ll find time/will to post it continuously... I`ll try my best, but don`t expect too much...
Most of the time

Damir, I never had a chance to properly thank you for your help with the preamp. Your hand drawn schematic was what I used to wire it up. I don't think I could have done it otherwise. There were a few glitches along the way, but they were my fault. See link for picture of the top.I'm curious to see what amp you're working on now. Please keep us posted!!!Colin
