Hey-Hey!!!,I forgot to include the hunting season, and vacation surrounding this season when I predicted the delivery of the Merlin E-Linear S-265's. It won't be long, and for those interested in the PP grid chokes, I am going to set the PN, and perhaps gather another group buy.I just got into another project. Scored a Citation II from ebay and want to see how the Freed Iron really performs. It is a bit more useful at 3k8 a-a than the Peerless 16431 used in the W6 HeathKit. 3k3 a-a is a bit low unless you're headed for grid current(as the W6 did).cheers,Douglas

I will keep you in mind for sure. When ready, I will make announcement here. Mom never said any such thing.My friend Paul Ruby took that shot. It turned out quite well. Me and the GU80. That is a 450 Watt plate, true pentode with a thoriated tungsten cathode taking 12V at 12A. I think I will do ultra-sonic heaters. There is a chap in Ann Arbor that has some experience with those supplies and he'd help(and try to keep me from killing myself with a 1kV/1A power supply).cheers,Douglas
