Hehe, in the last hours of the old year I completed a PCBs for the PS caps (probably the compensation for laziness throughout the year:-)).I "strenghtened" the Cu-traces with o,8 mm Ag-wire.BTW, it`s anniversary of GB forum these days - lot of nice talk, but even some work, too... And, yes - a happy New Year to all!

Hi & welcome!I always used "primitive" method - marker, then nail polish for the Cu-traces, and Fe-III-Chloride (small clots + water). After a couple of hours, unnecessary Cu is gone and acetone gets rid of nail-polish.Huh, soldering can be better... Good enough for simple PCBs, see the link for another example...
