Hey-Hey!!!,I have three of the big magnet AlNiCo compression drivers and a single 811B horn. One driver is 8 ohm the other is 16 and the 802D is w/o its diaphragm. The other two have the Symbiotic types I was told. It is a mixed bag, and I'd rather trade for good OPT Iron, functional or not. Drop me a note and we'll go from there.regards,Douglas

Doug, I know you're a busy man with the move and all coming up, but could you tell me what the model numbers are on the compression drivers - assuming you still have them. I have decided on building a Altec Model 19-type. Do you have a matching pair of compression drivers that would work in this type of application (Xover approx. 1200Hz and compatible with the 811b lens)....Colin
