FS: 2 mid bass horns, 1/4 size, M=.6, 65hz folded horns. They are 28.5" wide x 28" deep x 33" tall. Weight is somewhere between 100 and 150 pounds each - very heavy so they are for pickup in north Florida only! They are constructed from multi-ply baltic birch and are unfinished. They were originally designed to work with the JBL2220A vintage 15" woofer but can work with many drivers. The only 2 things needed to do are tune the rear chambers and finish the cabinets. They are built like a tank and sound excellent. I also have 2 JBL 2220A drivers that I will sell with the bass cabinets. They have been reconed with original JBL cones and have hardly been used. Serial numbers 17262 and 15849. I'm asking $300 for the bass bins or $600 for the cabinets and drivers. If you are really interested, let me know and I can send some pics. I'm sorry, I can't ship these.
