Subject: Bleeder Resistors Posted by Shane on Tue, 17 Oct 2006 03:34:11 GMT View Forum Message <> Reply to Message

I know this has been covered about 1000 times (maybe more)and I posted this over on the Bottlehead site as well, but just wanting to see if using these particular clips with a bleeder resistor would be the way to go to discharge caps? Just solder in the resistor after cutting the lead wire and heatshrinking everything 2-3 times over the resistor leads and edge of the resistor? Oh, and don't touch the resistor or let it touch other things, I'm thinking, as the cap discharges. Clip Leads

Those look like the clips often used on oscilloscope and multimeters. Should work pretty well. One thing to think about though: If the voltage is high so that there is a bit of arcing as the connection is made, the clip leads might erode over time. There's not a lot of meat on clips like this. Alligator clips are more sizeable, but then again, that means it would be harder to get them connected in tight spaces.
