Hey Bill,I have a pair of JBL 4560 bins, currently loaded with EVM-15L. I'm pretty happy with how they integrate with the rest. Going to go to 16R RCA compression drivers and upgrade the tweeters too.Soooo, the 16R JBL looks good to my uneducated and tweak-happy self. Any experience on these drives in that cab? any basis for comparison?cheers,Douglas

Just saw your question. A quick trip to Lansing Heritage yielded little info except that the 4560's are tuned to 30 Hz. That denotes an FS lower than the 2226 which is really a mid-woofer at Fs 40 Hz. If you're looking for low end grunt the 2305 is the thing. 2226 specialises in really low distortion crispy bass to the Fender low E string.
