A question for those with some building experience...This guy says that all other parts can be found "off the shelf"...Is this correct, and if so, is this worth going after??<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5830612000&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1>Thanks,Jeff

let's see, a SE 2A3 op point is 250V at 60 mA. Working into a 2k5 load(hopefully one with more than 30 Hy of primary inductance). The 55 mA rating on that TX looks sort of thin to me.cheers,Douglas
