I'm contemplating selling my Millett Hybrid headphone amp with matching Cross clone (crossfeed). I've got around $275 invested in building them FWIW, not including any labor time or such of course. This is the amp Akhilesh listened to at GPAF.Specs include:original group buy board from DIY forumsopa551 buffersRaytheon 12FK6 tubesKiwame resistors (output still has a metal film in it, but have Kiwames for them)Cerafines on the output capsWima film capsTREAD regulated with wallwartAlps Blue Velvet potNeutrik locking jackbamboo/zebrawood/aluminum casingAlps Rko97 pot/switch combo as the power switch.There are tube sockets soldered to the board as well as the ones mounted to the aluminum strip if you would like to put a clear top on it.Cross clone is air wired -it looks a tad messy I knowJan's recommended Lorlin switchesStackpole and Radioshack carbon film resistorsWima film capson/off/on switch

Here's the inside of the Cross clone. Told you it looks somewhat messy! The Millett is much neater and is on a PCB.

Fitz, I just had someone make and offer on the pair over at Head-fi this morning. I hadn't had time to update here yet. If it falls through for some reason I'll let you know here.
