Hi,ICs are an important part of the stereo system and minimizing all forms of distortion is very important.There are three main problems with ICs that cause problems.1) High capacitance.2) Obtaining plugs and wire that are truly neutral. 3) Proper termination.I test by using special multiple listening techniques (no one else uses) to find the wire, connector, and proper termination that is necessary to creat a truly neutral and accurate IC. This means Jenalabs 6N, cryogenically treated wire, Vampire all copper plugs, and the proper, proprietary, termination technique that no one else uses to my knowledge. I am having a special sale of approx. 10% off normal list price on all "V" ICs through July 30th, 2007. This includes S&H in continental USA. Normal list prices are:------List---------Special------Typ. CapacitanceV 1/2
meter----------$125.00------$115.00---------40pfV 1
meter----------140.00--------126.00----------80pfV 1 1/2
Meter----------160.00--------144.00---------120pfV 2
meter----------180.00--------162.00---------160pfNormal web address for other parts:
