Hi Wayne, I completely understand your position and we will keep you on our mailinglist. Just like you, I hate to see parameters change also! Talk about somework! It gets really crazy and the potential for mistakes is huge. In fact, another reason for the last revision was that we seemed to have gotten different data in different places ie. catalog, web site, EminenceDesigner. I felt that it was prudent we take a close look at all the published information and get it exactly right in all locations. The fact is, I do not anticipate another change again. Should a component change that affects the performance of the speaker, we will simply source another component so that we can maintain the performance of the speaker. The bottom line is, I will inform you of any future changes, but can fairly well assure you none will occur. Thanks again for your patience and understanding on this matter. We appreciate the fact that you use Eminence and support our company. We want to support you as well. With kind regards, Chris Rose Eminence
