In a 12 x 10 room which PI or other HE speaker system would you recommend for a low powered tubed or refined SS amp (source CDs and LPs)? This is my first time on this forum. In case I am not familiar with the PI line or distribution internationally please let me know. Thanks in advance!

Normally, horns and small rooms don't go together because horns are large. However, the seven Pi cornerhorn will work in a room that size because it tucks nicely away in a corner and doesn't require a lot of distance to integrate.
