Hi Folks, Wayne, The web page I did for Wayne is a gift for all the time he puts into this group and helping other out. I've been mentioned in one other thread about attenuation also. I'm working on a pair of Four-Pi's using Eminence Kappa 15's, Altec 811 horns/806A drivers, and EV TW-35 tweeters. I'll post pictures once I get both built and have a cabinet for the horns. There's now way both of those would fit in the box. I'm going to build a separate box that goes on top. Chris

Very cool web page, thanks for doing it! Here's a link to other people using Altec components and/or horns in Pi Speakers: [Pi's with Altec's](#)

How do you incorporate the 511s into the four Pi's plans, does the crossover and enclosure stay the same, can I do this with my four Pi's?

The horns are very different because the radiation pattern isn't the same. Altec 511's are able to load the driver lower and they have collapsing directivity which tends to provide more acoustic EQ. I would probably use a little less top-octave compensation with them.
