Well, I am placing my last order so I will have all of parts I need for the Four Pis, so I now have a total cost of the parts. I searched around and found some pretty good deals so I feel I am getting quite a bargain on my Four Pis. Order#1 (2) 2426H drivers, open boxed but never used \$390 shipped Order#2 Parts Express (2) H290 horn flares and (2) Dayton .47uF film caps \$70 shipped Order#3 Mars Music (2) 2226H drivers \$577 shipped Order#4 Madisound speaker components, crossover parts \$67 shipped Grand total spend on all the parts \$1104.00 (if I did not care about cost and just bought it all from Parts Express then it would have cost me around \$1400) But believe me, it was a lot of work to save that \$300!! Shortly I will begin building the enclosures, I will have pics of the raw enclosures, crossovers, finished enclosures, and the finished speakers. I am either going to finish the speakers in an esoteric wood veneer like birdseye maple or a nice looking Formica laminate ...like my last speaker project that is shown.. whatever I do it will be unique.

just curious what material selections you used on the speaker shown on your post. In particular, the cabinet base and nosing trim. A handsome look! Thanks
