hi gang, my cabinetmaker just finished my 4 pi's and i'm ready to start installing. is there any benefit to using the premium sound dampening materials over good old fiberglass other than the itch factor?p.s. i would still consider 4 pi's to be fairly large speakers, in the same league as the old jbl 112's. here's how i convinced my wife to let me put them in the living room, i brought home the theater 7 pi's first! cheers.

I've always had success with good old R11/R13.

Hi Wayne and other big bass lovers. We incourage you to try it out our product. I think you will be impressed. It would be best to try it on a good 15" sub with a good stiff suspended woofer.RegardsCarl BillingtonCEO/InventorEagle's Talon Productions Inc.inventor@basslinear.com

BassLine , an acoustic enhancement invention.
