Hey fellers: Can you use the delta 15's in a folded horn design? I really want to make the corner 7 pi's, but my house has only one real good corner. I've already purchased the drivers and want a horn design for tube equipment. I know I could do the bass reflex 4 pi but I'm just a horny kind of guy.

I think the four Pi or seven Pi would be your best bets for the Delta 15. I don't think it would be well suited to a folded basshorn.
